experience

WillowTree Apps, Remote — *Platform Software Engineer*

July 2022 - PRESENT

– Individually led the front-end implementation of Sumsub Fisherman for a client's candidate application flow to improve fraud detection.

– Helped streamline an HR client's complex recruitment process by building a brand new candidate application process flow and candidate tracking dashboard with React.

– Drove the front-end development of new debt tracking features for a financial client where I integrated Method Financial and Plaid into their React application. Led biweekly demos to key stakeholders.

– Independently supported a client's legacy website where I resolved critical security vulnerabilities, implemented cookie and consent management with OneTrust, and led biweekly releases to production.

WillowTree Apps, Columbus, OH — *Software Engineer*

June 2021 - July 2022

– Rebuilt a large restaurant client's marketing website alongside the implementation of Optimizely's Content Management System with Razor Pages. Built a new, modern online ordering experience with React and Olo.

– Won the February 2022 "Leather Bound Book Award," an award akin to Employee of the Month, for my achievements as a top contributor on my team and for my strong attention to detail in code review.

education
